Address

Belarus, open to remote

Portfolio

[YouTube – 20+ game demos](#)

Expertise

Core

C#, .NET, Unity Engine

Gameplay & Systems:

Gameplay systems, UI systems (uGUI), FTUE, live features, localization, Addressables, DOTween, Cinemachine, NavMesh, Coroutines, Async/Await, UniTask, Spine 2D animation integration

Multiplayer

Photon Fusion, PUN2, Nakama

Backend & Integrations

Firebase (Auth, Firestore, Cloud Messaging, Analytics, Crashlytics), REST API, UnityWebRequest, Sentry, OneSignal, Facebook SDK, Google Sign-In, Apple Sign-In

Monetization

Unity IAP, AdMob, Unity Ads

Architecture & Tools

SOLID, MVC/MVP, Zenject, Custom Editors, Property Drawers, Unity Assembly Definitions

Performance & Debugging

Unity Profiler, Memory Profiler, mobile optimization, debugging, crash analysis, Unit testing

Platforms & Workflow

Android, iOS, WebGL, PC, Git, GitHub, GitLab, Jira, Cursor IDE

DMITRY VANIUK

C# UNITY DEVELOPER

Unity Developer with 4+ years of experience delivering commercial games and interactive products across mobile, PC (Steam), and WebGL platforms. Focused on scalable gameplay and client-side systems, multiplayer and backend integrations, monetization, and performance optimization. Proven ability to take ownership of complex features from core architecture to release, solve technical bottlenecks, and deliver stable production solutions for live products.

Experience

Feb 2025 – Mar 2026

GameDev Studio - [Celadon Soft](#)

Unity Developer

Card game (Feb 2025 – Mar 2026) - [GooglePlay](#)

Technologies: C#, Unity, Nakama, Firebase Firestore, Firebase Auth, Firebase Cloud Messaging, Crashlytics, Facebook SDK, Apple Sign-In, Google Sign-In, OneSignal, Sentry, Unity Localization

- Solely responsible for Firebase infrastructure: Firestore security rules, indexes, access control, and environment configuration
- Integrated Nakama: match state transitions and in-game real-time chat
- Implemented full FTUE flow: scripted step-by-step onboarding from zero to first match result
- Architected full authentication system (Firebase Auth + Facebook, Google, Apple ID) with session persistence and account linking
- Built end-to-end push notification pipeline (Android/iOS): deep-link routing from push tap → app activation → in-app navigation
- Developed Mail Center: full CRUD via Firestore (send, receive, edit, delete)
- Implemented Season Pass reward system with server-driven progression and dynamic prize UI
- Built paginated leaderboard with real-time server-side ranking
- UI systems: Profile, FTUE, Settings, Ranking screens
- Audio system architecture, SDK integration (Sentry, OneSignal)

Jul 2022 – Feb 2025

Contract Unity Developer

Unity Developer

Fight of Castles - [GooglePlay](#)

Technologies: C#, Unity, Nakama, Firebase Firestore, Firebase Auth, iOS, Android

- Identified and resolved performance bottlenecks on low-end Android devices: implemented LOD for 3D meshes, refactored core systems, and migrated heavy operations to Coroutine/Async — resulted in stable 30+ FPS on target devices
- Implemented A* pathfinding for enemy AI navigation
- Firebase Analytics for event tracking; AdMob monetization integration
- Memory Profiler used to detect and eliminate critical memory leaks

The Hidden Library - [Steam](#)

Technologies: C#, Unity, Spine 2D, PC (Steam)

- Built the core gameplay foundation for a story-driven 2D point-and-click adventure: player interaction, inventory, scene flow, and level progression systems used across the entire game
- Designed and implemented 4 complete game levels from blockout to release-ready state
- Developed a set of standalone story-driven mini-games integrated into the main narrative flow
- Integrated Spine 2D character and environment animations delivered by the art team: runtime setup, animation state management, and syncing animation events with gameplay logic

DMITRY VANIUK

Experience

Event Controller App - [GooglePlay](#)

Technologies: C#, Unity, REST API, YouTube SDK, iOS, Android

- Developed a remote control app for live events: attendees connect via QR code and control media playback (YouTube, local files, presentations, music) on a host Windows PC in real time
- Unified cross-platform file management (Android, iOS, Windows)
- Built server sync via byte array file transfer for multi-device content distribution
- Integrated YouTube SDK for video playback; REST API for host-client communication

NFT Holders - [Minton.io](#)

Technologies: C#, Unity, WebGL, Thirdweb SDK

- Refactored legacy codebase and resolved critical gameplay bugs in a Web3 blockchain card/casino game (WebGL)
- Implemented server interaction for processing winning combinations across thousands of possible outcomes with correct prize allocation
- Integrated Thirdweb SDK for wallet-based authentication and blockchain transaction handling

○ Aug 2021 – Jul 2022

School of Programming & Robotics

Lecturer → Senior Lecturer

- Taught C#, C++, HTML/CSS fundamentals and Unity game development to students aged 8–15 (up to 12 students per session)
- Designed and led scripted robotics classes; developed course materials independently
- Promoted to Senior Lecturer after half a year for demonstrated teaching quality and student results

Education

2015 - 2020

**Bachelor of Engineering –
Automation Engineer**

Vitebsk State Technological
University

Language

English

Russian

Belarusian
